

General Motors Energy Management Policy

General Motors offers a range of mobility services in more than 120 countries around the world. We are committed to safety in everything we do, earn customers for life, build brands that inspire passion and loyalty, translate breakthrough technologies into vehicles and experiences that people love, and create **sustainable** solutions that improve the communities in which we live and work. Our vision is a future world with zero crashes, zero emissions and zero congestion.

In support of our vision, General Motors is committed to continuous improvement in energy management for our operations. We will continue to establish goals and objectives to meet the future vision of “Zero Emissions”. The goals will be based on these pillars:

- Reliable, competitive, and sustainable energy sourcing
- Energy efficiency and conservation
- 100% Renewable electricity use by 2040

Objectives to meet the goals will be consistent with all laws and regulations for the counties in which we operate. Energy management is integrated into our manufacturing business plan, Global Management System (GMS). Annually, goals, objectives, and targets are established for each facility to meet company goals for energy intensity. Monthly, performance to targets are measured to ensure a pathway to annual goals. When the pathway is not met, countermeasures are established to correct the pathway to meet the targets with regular review by management at all levels of the company. All mobility operations will use a similar method to plan for energy management and provide adequate resources and funding to achieve our goals and objectives consistent with ongoing business return on investment objectives.

General Motors is committed to procurement of energy efficient products and services to meet our goal and objectives. We understand that the most effective step change for efficiency is with new products and services for continuous improvement.
