AT&T:

Centralizing Energy Data and Operations with a Customized Energy and Building Management Solution

AT&T's Energy and Building Management Solution (EBMS) uses Internet of Things technology to gather and centrally manage over 240 million performance data points each day from equipment across over 1,000 facilities, enabling an average of 8-10% savings in operating expenses since 2012.

-  In 2022, led to more than 140 projects being implemented at 106 sites, saving more than \$1 million in energy costs
-  Generates alerts when a “fault” occurs leading to projects like fixing leaking chilled-water valves and replacing inefficient lighting fixtures, to more complex initiatives like upgrading control systems and chillers
-  Reduces the cost, time, and fuel facility technicians spend traveling to remote sites to perform routine maintenance and proactively identifies project opportunities
