Home Energy Efficiency for Real Estate Professionals

April, 2017
This Presentation Covers:

- The importance of energy efficiency to homebuyers
- Work being done to help you meet clients’ desires for home energy information
- How to keep up-to-date with home energy certifications, labels, and ratings for your clients
- Links to resources for learning more
Why Care About Residential Energy Efficiency?

Improving residential energy efficiency helps to:

- Improve in-home comfort for home owners, buyers, renters
- Save families money on energy bills
- Reduce wasted energy resources
- Foster growth of energy efficiency jobs in local economy
- Stabilize monthly home costs as energy prices change
- Mitigate health impacts of homes, including mold, allergens, and pests
Why Do Homeowners & Buyers Care About Energy Efficiency?

Helps Reduce Costs:
- **U.S. Census**: On average, energy costs are higher than either property tax or insurance for U.S. homes at $2,506 per year.

Smart Investment:
- **Remodeling Report**: Attic insulation achieves highest return on investment of all home improvement projects studied at 116.9%.
  - Attic Insulation averaged the cheapest upgrade at $1,268.

Improves Quality of Life:
- **NARI Report**: Energy improvements are good investments that bring financial relief and “joy”.
  - Insulation Upgrade: 61% say greater desire to be home, 95% same or increased sense of enjoyment, and 66% major sense of accomplishment.
- **DOE’s Home Rx Report**: Energy efficient homes can improve occupant health outcomes related to asthma, hypertension, and allergies.
Buyers need access to energy efficiency information that is credible and easy to understand.

Sellers need tools that can accurately appraise the value of improved energy performance.
As a real estate professional, you can be the bridge between your clients and the energy information they want.
Studies Nationwide Show Energy Efficient Homes Sell for More, Faster

- Certified homes sell for 9.6% more
- Certified homes sell for 4.2% more & 18 days faster
- Certified homes sell for 2.1 to 5.3% more
- PACE homes delivered $199 to $8,882 in savings above cost of improvements
- Homes that disclose energy costs sold 20 days faster
- Homes that use “green” fields consistently perform better on market indicators
- ENERGY STAR homes sold at $5,566 premium at $2.99 per ft² more, & 89 days faster
- New certified homes sold for 12.9% more, $13.82 per ft² more, & 42 days faster
- Homes designated relatively energy efficient sold for an average $3,416 premium
- Houses with one or more green element sell for 5.9% more

*Not all studies shown have been peer reviewed.
The Research Says: Homebuyers Value Energy Efficiency

Studies Show a Sales Premium of:

- **2% to 6%** for designated energy efficient homes \(^1, 2, 3, 7, 12\)
- **$2.99 to $13.82 per square foot** for every dollar saved on annual electricity bills from efficiency investments \(^1, 5, 10, 15\)
- **$3,416 to $8,882** for designated energy efficient homes \(^4, 8, 9, 12, 13, 14, 15\)

*Not all studies shown have been peer reviewed.*

Providing Energy Information Can Help Reduce Uncertainty

Elevate Energy, 2015: Chicago Homes that Disclose Energy Costs Spend Less Time on Real Estate Market

- Homes that provide energy costs: median 43 days on market; 66% closing rate
- Homes that did not provide energy costs: median 63 days on market; 53% closing rate

Hill et al., 2016: In EU, Canada, Australia, homebuyers appreciate having more information rather than less; poor ratings don’t discourage home purchases, but do inform energy upgrades

- This helps them make the most informed decision possible, even if they will need to fix an energy feature of the home
- Analysis of European disclosure programs shows homebuyers do not use ratings to discourage home purchase, rather simply to inform sale (p. 11)
- 2013 EU Study: 2% - 6% appreciation in home value attributed to one-letter rating improvement

Voluntary disclosure may be a good option for your clients selling their homes

Energy information with recommendations influences new home owners into making energy renovations.

### Assessments of Home Energy Ratings on Conversion Rates

How to Provide Energy Information: DOE’s Home Energy Score

- A “miles-per-gallon” rating for homes
- Affordable, reliable, & easy way to understand a home’s energy performance
- Third-party verified
- Any single-family or town-home can get a Home Energy Score
- Helpful for any of your clients
  - Shows seller cost-effective investments to improve their home’s score before they sell
  - Lets seller showcase energy improvements they have made to their home at time of sale
  - Tells potential homebuyer information about a home’s energy features
Home Energy Score: A Tool for All Homes

The U.S. Department of Energy's Home Energy Score assesses the energy efficiency of a home based on its structure and heating, cooling, and hot water systems. For more information visit HomeEnergyScore.gov.

Score Today: 3

Score with Improvements: $573
Home Energy Score: What It Means

The Score is more useful than looking at prior utility bills

- Assumes average weather for that location
- Controls for impacts due to occupant behavior by assuming “average” behavior for all homes

Score with Improvements:

- Reflects how the home will score if cost-effective efficiency improvements are made

Score of 1: High energy costs

- These homes are expected to use more energy each year than 85% of U.S. homes

Score of 5: Average energy costs

- Approximately 50 percent of homes in the U.S. use less energy

Score of 10: Low energy costs

- Homes expected to use less energy than 90% of U.S. homes; easier to keep living space comfortable
Other “Green Home” Designations to Know About
Example: Home Performance with ENERGY STAR Certificate of Completion

- Proof home underwent energy efficiency upgrades to improve performance
  - A systematic approach to improving energy efficiency and comfort in homes
  - Reduces greenhouse gas emissions that contribute to climate change
- Improvements must be completed by participating contractors
- Third party verified by an organization separate from the contractor
Green Fields with Home Energy Score Added to MLSs

- REColorado (Denver, CO)
- Aspen Glenwood (CO)
- Cincinnati (OH)

- MRIS (DC, VA, MD)
- NEREN (VT, NH)
- & Others!
Real Estate Professional Education

Agents need resources to learn how to enter data fields correctly

- “0” HERS Rating = Perfect Score / Zero Energy Home!
- “0” Home Energy Score = Nonsensical / Terrible Score!
- ENERGY STAR Appliances ≠ Home ENERGY STAR Certification

Use resources provided on DOE’s Home Energy Information Accelerator website
No Green Fields in the MLS?

Add Home Energy Score or other green label in the comments or “remarks” section

- Simply upload the verifying document from the homeowner as an attachment
- No need to wait for green fields to be available

Advocate for green field adoption on your MLS

- Ask the MLS to achieve RESO’s Silver Certification to standardize the data entry
Financing Options for Energy Efficiency Improvements

Finance up to 15% of “as completed” home value for energy improvements

- $500 incentive to lender on each loan
- Pay off existing energy improvement debt (including PACE)

Requires a Home Energy Score, HERS report, or comparable locally-supported report

- Finance up to $3,500 in weatherization or water-efficient improvements with no energy report

Source: Fannie Mae HomeStyle Energy Mortgage Loan Real Estate Fact Sheet
Additional Loan Opportunities

FHA’s “stretch” policy

- Allows borrowers to qualify for a 2% stretch on debt-to-income ratios for homes that score a 6 or higher, or for improving less efficient homes to that threshold
- Aligned with Fannie Mae’s HomeStyle Energy policy

Property Assessed Clean Energy (PACE)

- $2.2 billion financed in California for energy efficiency, renewable energy, and water efficiency
- Other states looking to adopt
- Home Energy Score can be used to identify cost-effective measures, provide an objective estimate of savings, and document value after improvements are completed

State & Local Loan and Financing Options

- Visit www.dsire.org to learn about financing and rebate options available in your area
What Can You Do?

Ask sellers if their home has any third-party certifications, and include them on the MLS

- Clients with efficient homes can better market its value
- Homes certified as “green” sell for more, and faster!

Encourage buyers to value energy efficiency in their home purchasing decisions

- An energy efficient home is likely to have lower and more stable energy bills, and more comfortable living spaces
- Ensure every client gets a beautiful, comfortable, and functional home

Encourage all clients to get a Home Energy Score

- Improving energy efficiency of homes may qualify for financing & incentives
- If desired, list the Home Energy Score on the MLS. Fix it before you list it!
- Team up with home inspectors that offer the Home Energy Score

Encourage your local MLS to include “green fields”

- This will help standardize listing inputs and engage more real estate professionals
- Advocate for the MLS to achieve RESO’s Silver Certification, which includes green fields
